

D-FROST DE-ICING FLUID

XL-5001 D-Frost works by safely and quickly eliminating ice on contact. D-Frost's proprietary formulation is designed to attack and break the crystalline bonds of frozen materials allowing them to remain supple and easily manipulated, and uses the same proven technology that is currently being used in FAA- approved aircraft de-icing fluids.

XL-5001's formulation incorporates a carefully balanced selection of environmentally friendly components while maintaining the highest level of de-icing power.

XL-5001 prevents the formation of ice crystals on treated surfaces down to -50°C.

XL-5001 can be used safely on most common construction materials.

XL-5001 can be sprayed directly onto the metal surfaces of bulk containers to prevent materials sticking due to the ice, or directly onto frozen wood chips to facilitate the complete release of frozen chips that otherwise remain stuck to van walls.

XL-5001 is completely water-soluble and non-flammable.

XL-5001 D-FROST is also very efficient for sawdust, bark and waste transportation and storage units. **XL-5001** can be applied to rail cars, chip and sawdust hoppers, mill conveyors and feeding chains, yard loaders, garbage and recycling material dumpsters, as well as waste disposal containers.
